

# Presentation Title

## Subtitle or Course Name

Your name

City University of Hong Kong

May 14, 2026

香港城市大學  
City University of Hong Kong

# Outline

- 1 Introduction
- 2 Methodology
- 3 Experiments
- 4 Discussion

## Context

- Briefly describe the topic area.
- Explain why this problem matters.
- Provide key terms or definitions.

**Problem statement:** summarize the core question in one sentence.

# Motivation and Objectives

## Motivation

- Why now?
- Who benefits?
- What gap does this work address?

## Objectives

- Objective 1
- Objective 2
- Objective 3

## High-level pipeline

- Step 1
- Step 2
- Step 3

## Key components

- Component A
- Component B
- Component C

## Architecture summary

- ➊ Input / data source
- ➋ Processing / method
- ➌ Output / evaluation
- ➍ Deployment / usage

## General objective

$$\mathcal{L}(\theta) = \frac{1}{N} \sum_{i=1}^N \ell(f_{\theta}(x_i), y_i) + \lambda \Omega(\theta) \quad (1)$$

## Symbol definitions

- $x_i$ : input sample,  $y_i$ : target label.
- $f_{\theta}(\cdot)$ : model with parameters  $\theta$ .
- $\ell(\cdot)$ : task loss,  $\Omega(\theta)$ : regularization term.

# Equation Template: Update Rules

## State transition and parameter update

$$h_t = \phi(W_h h_{t-1} + W_x x_t + b), \quad (2)$$

$$\hat{y}_t = g(W_o h_t), \quad (3)$$

$$\theta_{t+1} = \theta_t - \eta \nabla_{\theta} \mathcal{L}(\theta_t) \quad (4)$$

## How to reuse this slide

- Replace functions  $\phi, g$  with your method-specific operators.
- Keep notation consistent with your earlier problem definition.

# Figure and Table Overview

**Figure 1:** Lenna sample image for visualization template

**Table 1:** Performance comparison across methods

| Method   | Acc. (%) | Lat. (ms) | F1   |
|----------|----------|-----------|------|
| Baseline | 84.2     | 72        | 0.83 |
| Method A | 88.7     | 65        | 0.88 |
| Method B | 90.1     | 61        | 0.90 |

# Experimental Setup

- Dataset description
- Hardware / software environment
- Metrics and baselines

## Protocol

- Explain how experiments are run.
- Explain how results are compared.

## Main quantitative findings

- Result 1
- Result 2
- Result 3

## Interpretation

- What worked well?
- What did not work as expected?

## Takeaways

- Core insight 1
- Core insight 2
- Core insight 3

## Limitations

- Limitation 1
- Limitation 2

## Conclusion

- One-sentence conclusion.
- Practical implication.

## Future work

- Next step 1
- Next step 2

## Optional extra material

- Additional charts
- Extra derivations
- Q&A notes
